

170. Two Sum III - Data structure design

[Description \(/problems/two-sum-iii-data-structure-design/description/\)](/problems/two-sum-iii-data-structure-design/description/)[Hints \(/problems/two-sum-iii-data-structure-design/hints/\)](/problems/two-sum-iii-data-structure-design/hints/)[Submit](#)[Pick One \(/problems/random-one-question/\)](/problems/random-one-question/)

Design and implement a TwoSum class. It should support the following operations: add and find .

add - Add the number to an internal data structure.

find - Find if there exists any pair of numbers which sum is equal to the value.

Example 1:

```
add(1); add(3); add(5);
find(4) -> true
find(7) -> false
```

Example 2:

```
add(3); add(1); add(2);
find(3) -> true
find(6) -> false
```
