Pick One (/problems/random-one-question/)

Given an array `nums` of  $n$  integers and an integer `target`, find three integers in `nums` such that the sum is closest to `target`. Return the sum of the three integers. You may assume that each input would have exactly one solution.

Example:

Given array `nums` = [-1, 2, 1, -4], and `target` = 1.  
The sum that is closest to the target is 2. (-1 + 2 + 1 = 2).
